The New BUNN-LER from BUNN

Operation

Simple operation. The operator positions the package on the table between the yellow lines then grabs the film with his/her left hand and holds the material to the side of the bundle. The person then steps on the foot pedal. By means of a revolving arm that carries the film around, the package is wrapped and secured. The operator then tears the film by using the index finger to press the material against the lower edge creating the tear. The operator can wrap the package as many times as required. The operator can also create a spiral wrapping design by pulling the package out of the machine during the wrapping cycle.

Applications

The Bunn-Ler is ideally suited for the following applications:
Printers, publishers, direct mail operations
Cartons, boxes bundles
Textile, garments, uniforms, linens and commercial laundries
Industrial, furniture, wood products, doors, window moldings
Retail, food, pharmaceutical, electronics distribution.

Features

Less than 5 seconds to bundle with 3 wraps
Adjustable Tension Control
Pre-stretch bar
High Strength, Quality Frames
Made in America.
