- Programmable Logic Controlled Cycle Counting
- Choice of Wraps 1-10 wraps per cycle
- Designed to Minimize Operator Mis-Ties
- Improved Tension Control for Tighter Ties
- Guarded for Safety with Durability
- Heavy Duty Casters
- Adjustable Leveling Pads
- Table Heights from 30" to 36"

### Available Options

- Bundle Compression
- Input and Output Conveyors
- Turn Tables for Cross Tying Bundles
- Removable Tying Head
- Plus more

Back in 1943 Benjamin H. Bunn created the Bunn Ring Tyer for elongated bundles. The New Bunn Ring Tyer still uses the quality Bunn Tying Head System, that has stood the test of time since the beginning. Now we've added a new twist. The New Bunn Ring Tying Machine has many options available which will increase production flow, reduce downtime, lower maintenance costs, while improving production.

Our New Electronic Control System adds flexibility to easily interface with other equipment in your shop to enhance your bundling requirements.

QUALITY PRODUCTS

## Operations:

Simple operation. The operator positions the package on the front table, then presses the foot trip. By means of a revolving arm that carries the twine around, the package is secured. The Bunn Tying machine automatically adjusts the length of twine.

## Applications:

Bunn Tying machines are ideally suited for the following applications:

Printers, publishers, direct mail operations  
Cartons, boxes, bundles  
Textile, garments and commercial laundries  
Industrial, furniture, wood products  
Retail, food, pharmaceutical, electronic distribution  
Metal products

## Features:

Programmable controller  
Automatic and adjustable tension for reduced product damage  
Heavy duty swiveling casters  
Heavy duty adjustable leveling pads  
Heavy duty constructed frame  
Steel access door with electrical safety disconnect  
Simple twine threading procedures
