

BUNN

STANDARD MODELS

1091, 1691, 1991, 2091, 2491 and 3091 TYING MACHINES

800-222-BUNN

- New style guarding, easier access for rethreading and servicing the machine.
- Electrical disconnect prohibits use of the machine without guarding.
- New high strength frames.
- Choice of wraps, front tables and twines or polytapes.
- Patented Bunn Knotter Lock gives traditional long service capability.
- Patented dual tension Stringholder
- Double headed drawslide, roller twine arms for interchangeability between twines and polytape.
- Superior tension control for tightest possible tie

WWW.BUNNTYCO.COM

The all new Bunn String Tying machine has improved strength, quality and longevity while utilizing the latest manufacturing technology in keeping with the same concept as the original Bunn String Tying Machines built since 1907

OPERATIONS

Simple operation. The operator positions the package on the front table, then presses the foot trip. By means of a revolving arm that carries the twine around, the package is secured. The Bunn Tying machine automatically adjusts the length of twine.

APPLICATIONS

Bunn Tying machines are ideally suited for the following applications:

- **Printers, publishers, direct mail operations.**
- **Cartons, boxes, bundles**
- **Textile, garments and commercial laundries**
- **Industrial, furniture, wood products, foam bundling**
- **Retail, food, pharmaceutical, electronic distribution**

Features

- **Cycle speeds of up to 44 ties per minute.**
- **Newly designed guard for safety and ease of servicing the machine**
- **Automatic and adjustable tension for reduced product damage.**
- **Re-designed Casters for improved mobility.**
- **New high strength quality frames**
